

**MERKAVA MK. III**

Im Frühjahr 1989 wurde der erste Merkava Mk. III im Rahmen einer feierlichen Zeremonie auf den Golanhöhen an den Kommandeur der 188. Brigade der IDF (Israel Defence Force) übergeben. Der Panzer ist das Produkt einer kontinuierlichen Weiterentwicklung der vorangegangenen zwei Typen. Als Bewaffnung dient eine 120mm Kanone; 3 MG's sind auf dem Turm angebaut, im Turminnenraum befindet sich ein fest installierter 60mm Granatwerfer. Für eine bessere Beweglichkeit wurde der bewährte luftgekühlte Teledyne Continental AVDS-1790-9AR Turbodiesel auf 1.200 PS Leistung gesteigert. Zum besseren Schutz der Besatzung wird dieser Motor beim Merkava traditionell im Bug eingebaut. Die größeren 120mm Granaten bedingten eine Verringerung der mitgeführten Munition, dies wurde aber nicht als Nachteil angesehen, da Untersuchungen ergeben hatten, dass ein Großteil der Verluste in der Vergangenheit durch explodierende Munition hervorgerufen wurden. Die große Heckklappe, die beim Merkava Mk. I schon für großes Aufsehen gesorgt hatte, ermöglicht das schnelle Aufmunitionieren mit palettierter Munition auch im Gefecht. Der Stauraum wird natürlich auch zum geschützten Transport von Verletzten, einer Austauschbesatzung oder von Infanteristen genutzt.

MERKAVA MK III

In the spring of 1989 the first Merkava Mk. III was handed over to the Commander of the 188th brigade of the IDF (Israel Defence Force) in an official ceremony on the Golan Heights. This tank is the product of the continuous development of the two previous types. As armament it carries a 120 mm cannon, there are 3 MGs mounted on the turret and inside the turret is a permanently installed 60 mm mortar. To improve manoeuvrability, the power of the tried and tested air-cooled Teledyne Continental AVDS-1790-9AR turbodiesel was increased to 1,200 hp. To provide better protection for the crew this engine is traditionally at the front of the Merkava. The larger 120 mm shells necessitated a reduction in the ammunition carried, but this was not regarded as a disadvantage as investigations proved that in the past a high percentage of losses had been attributable to exploding ammunition. The large rear hatch that had attracted great attention to the Merkava Mk I, enables the ammunition to be loaded quickly on pallets, even in battle. Naturally, the stowage compartment can also be used to transport the wounded, a substitute crew or infantry-men.

In 2020, Brazil reported the second-highest number of absolute deaths from COVID-19 in Latin America. Brazil's parallel transmission model, characterized by a lack of strict social distancing measures and a focus on economic recovery, has been widely criticized for its failure to protect public health. The country's low vaccination rates and high levels of social inequality have contributed to the rapid spread of the virus, particularly in rural and low-income areas. The government's initial response was slow and inadequate, leading to a significant increase in hospitalizations and deaths. In response, the government has implemented several measures, including a national lockdown, travel restrictions, and a ban on large gatherings. These measures have helped to reduce the rate of transmission, but the virus continues to circulate, and the country faces ongoing challenges in addressing the pandemic.

The results show that the proposed method can effectively handle uncertainty in the problem, and it is more efficient than other methods in terms of computational time and accuracy.

**FIGURE 1.** The relationship between mean baseline performance,  $\Delta$  (baseline minus post-treatment), and  $\Delta$  (baseline plus post-treatment) for each of the 25 subjects. The regression equation is  $\Delta$  (baseline plus post-treatment) =  $0.0001 + 0.0001 \Delta$  (baseline) +  $0.0001 \Delta$  (post-treatment). The regression coefficient for  $\Delta$  (baseline) is significant ( $p < 0.05$ ) and the regression coefficient for  $\Delta$  (post-treatment) is not significant ( $p > 0.05$ ). The regression coefficient for the interaction term is not significant ( $p > 0.05$ ).
